

Unlocking Business Intelligence from Reports

Now more than ever, businesses need greater access to vast amounts of information quickly to make decisions. But are they getting it? According to *Information Week*, despite collectively spending billions on data management and business intelligence tools, the answer in many cases is no.

Instead, the unfortunate result is that many business intelligence solutions somehow manage to cause more work, both for end users and the IT department costing huge amounts of time and money. The challenge for organizations is clear: empower users to easily access information in true self-service fashion. How to do it is the tough part.

Datawatch's solutions extract the information locked in report files. Reports that are provided as standard with every ERP, MIS or financials system, that require no additional IT investment and need no auditing. The method used to unlock data to help users search, sort, filter, summarise and share the information is report mining. It enables organisations to increase productivity and gain a competitive advantage.

Getting the right information to the right person at the right time

Datawatch's solutions range from three platforms for the delivery of report mining; through your desktop, server and browser. This free one day workshop will introduce report mining and show practical solutions from the desktop to the enterprise level. The presentations will include overviews of the variety of report sources that can be analysed.

- 09:30 *Registration*
- 10:00 Overview of report mining
- 11:00 *Coffee*
- 11:30 Report Mining on the Desktop
- 12:30 *Lunch*
- 14:00 Report Mining on the Server
- 15:00 *Coffee*
- 15:30 Report Mining via the Browser
- 16:30 *Close*

These seminars will be held in Glasgow on 22 May and in London on 19 June. Spaces are limited so to reserve your place please contact your inside account manager, Kris Smith today on 01752 241 456.
